# Decode 12.1 Hackathon

In a world where we are always running short of time, missing the deadline one after another because we lack time-management. So in this hackathon we will try to cope up with this challenge. We need to make a **Note Taking app.** It is an important aspect of the management of a project because it helps to follow every task thoroughly. Task management is useful and beneficial for different reasons such as prioritizing tasks, internal communication, project workflow, project participants' performance, and more.

We'll be creating a **Note Taking App** using these tech stack languages HTML, CSS, Java-script, React, React Hooks, Styled components, note-taking app, and some of the features we'll be replicating include creating notes and storing them at a place.

Create a web application with all the functionality stated below:

- Take a note (Title and Description)
- Delete a note
- Display all existing notes
- CRUD (Bonus)

Note* If you are performing CRUD operations additional points will be added to your bucket.

You can use functionality to store the created note on storage so as to backup when a refresh happens. (BONUS)

Tech Stack Recommendations:
- HTML, CSS
- JavaScript
- React(BONUS)
